

GrowFlow

Magnetic Water Conditioners

Great Water Clear Pipes No Ongoing Costs

GrowFlow brings you world-class expertise in the latest magnet technology and its application to water treatment.

GrowFlow Magnetic Water Conditioners are manufactured in Newcastle, New South Wales. Our parent company International Magnetic Solutions, is an Australian company with a commitment to excellence in the manufacture of high quality, rare earth permanent magnets. Our company has a scientific and technical team at the leading edge of world magnetic technology.

GrowFlow Magnetic Water Conditioners

Our Magnetic Water Conditioners focus a very intense magnetic field through the pipe wall into the water to be treated.

The very strong and intense magnetic field interferes with the ionic charges of the mineral ions (salts) in the water, which makes them behave differently. This change results in the water acting "softer". Calcium and magnesium no longer set like cement, and salts lose their ability to bind to the soil particles. So GROWFLOW water conditioners are the ultimate solution when you are using water from natural sources.

Use GrowFlow and See the Difference

With the water acting "softer", conditioners, soaps, detergents and cleaning chemicals all perform more efficiently, as a result less of each is required. Calcium, magnesium and bicarbonates no longer build up in pipes and fittings. Cement-like limescale no longer forms on glass and screens. Plant leaf-burn from saline waters is reduced, and the effects of salinity in soil on plant growth are reduced considerably and often prevented altogether.

Keep Pipes Clear

You can see the before and after effects on calcium scale in pipes

Water dissolves small amounts of every soluble mineral it contacts. Two of the most common minerals dissolved are calcium and magnesium. These dissolved minerals cause the water to be "hard" forming scale deposits on pipes, hot water systems and household appliances.

The GrowFlow conditioner keeps pipes clear and prevents "limescale" building up in household appliances that use water and surfaces like tiles, sinks and glass.

GrowFlow water conditioning is a superior, proven, environmentally safe, non-chemical approach to the treatment of water. In many areas of rural and urban Australia, magnetic water conditioning is the accepted treatment for a whole range of lousy bore water problems.

Reduce the effects of salinity

GrowFlowwater treatment will reduce the impact of salt on plants and soil giving you healthy lush vegetation and soil.

Advantages and Uses

The GrowFlow Magnetic Water Conditioner is extremely economical and environmentally friendly. No need for chemicals or electricity! No waste byproducts. No maintenance required. No water volume limits, and it NEVER needs replacing.

The GrowFlow conditioner is available in a variety of sizes and strengths to suit any situation where there is scale & iron build-up and/or blockages in water pipes. It can be used effectively for industrial, agricultural or domestic applications.

MagWrap

The Handy go Anywhere GrowFlow conditioner.

Experience the latest innovation from the Water Magnet Technology Leader, GrowFlow.

The Growflow Magwrap Water Conditioner is unique, versatile, efficient, super strong and very affordable. The revolutionary Magwrap can be wrapped around pipe sizes up to the maximum of 19mm.

Specifically designed for domestic use the Magwrap also does a great job when watering plants and vegies with a standard hose or drip system.
