## 2020 KM Nissan Patrol Sports Muffler Assembly

Firstly, the Patrol Y62 Sports Muffler is fabricated from 409 stainless steel, mandrel bent, and fully welded. Secondly, the 2.5-inch pipe is a considerable increase over the small 2-inch system that bolts to the back of the catalytic converters on the standard setup. And last but not least the muffler is a 304 polished twin in single out to 3 inches.

This system opens up the flow of the mid-section to better unload the catalytic converters for improved performance and V8 note. Although the standard tailpipe is already 3 inches, it contains a resonator that does not restrict the exhaust, therefore, it is purely there to remove any droning.

This system with the standard tailpipe provides maximum flow for improved performance and delivers an instant V8 Rumble.

This system is hand-made in-house by us at KM- Kuluin Mufflers. We are located on the Sunshine Coast Qld and specialize in Custom Exhaust Fabrication. All of our products are Australian-made and created from the highest quality locally sourced components. Most importantly, our fabrication team takes pride in the products we make to ensure our customers are 100% satisfied with their exhaust.

## Patrol Y62 Sports Muffler features:

- Replaces the factory mid-muffler with our bolt-in assembly and also reuses all factory hanger mounts
- 409 Stainless Steel for a longer lifespan
- This does not affect the new car warranty.
- No cutting or welding is required.
- Improved performance, especially with additional supporting mods such as intake and chip.
