Workforce Capability Dashboard

See what matters. Know where to act.

Bring learning, compliance and capability into one clear view. Help managers see expiry risks, review assessment results and identify the gaps that need attention.

Compliance at a glance

Monitor completion and expiry across learning, licences and qualifications.

Understand Capability

Review assessment and survey scores and capability gaps.

Focus follow-up

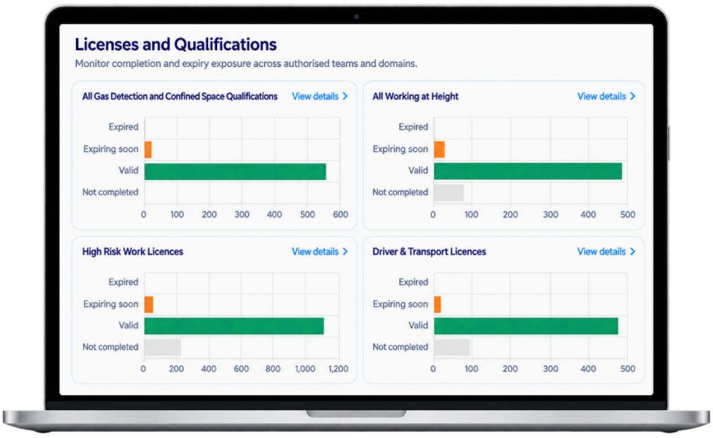

Use supporting records to investigate dashboard results.

Discover how WorkPlan brings compliance, capability and team progress into one clear view.

From workforce visibility to informed action

Publish a useful starting view for each role, then let members tailor the information they see to their own responsibilities.

1 Monitor compliance and expiry

Track completion rates, expired items and upcoming expiry for selected posts and portfolios. Quick start widgets include licences, competencies and mandatory compliance.

2 Understand capability and team progress

See how people are progressing against the requirements of their job roles. Using portfolios to organise each role's learning, compliance and competency requirements, portfolio widgets show completion rates and expiry status across individuals, teams and organisation. Help managers identify outstanding requirements and prioritise follow-up.

3 Turn assessments and feedback into insights

Bring performance reviews, practical skills assessments, and organisational and employee engagement surveys into view using survey and quiz widgets. Review overall scores, explore results by category or subcategory, compare assessments or assessor roles, and track scores over time to inform development conversations and improvement priorities.

Configure the measures that matter

Choose the data and display. Combine posts, portfolios, surveys, quizzes, performance reviews, capability gaps and teams. Use numbers, gauges, charts and tables suited to each metric.

Keep access role appropriate. Show personal results, selected teams or domain, or all accessible members where supported. Existing permissions govern the results.
