

Australia's No.1 Thermal Insulation Blanket

MINEBASE

SCAN ME

THERMAL INSULATION BLANKETS

Being located in Central NSW, we are close to some of the most productive underground mines in Australia. We have been exposed to the awful reality of vehicle-related fires. When we first started looking into Thermal Insulation, we found Fibreglass tape lagging was the most common choice for our clients.

We came to the realisation, through experience and testing, that the fibreglass material actually caused an additional hazard! It becomes a reservoir for flammable liquid.

After hours and hours of tests and trials, we have developed a new product that is completely fire-preventive. **Unlike other blankets, our MineBase thermal insulation blankets do not absorb any liquid.**

BENEFITS OF THERMAL INSULATION BLANKETS:

- ✓ Eliminations ignition points.
- ✓ Increased safety for operators by reducing hot surfaces.
- ✓ Extends life expectancy of exhaust components due to more evenly spread temperatures.
- ✓ Custom design - each machine model is tailor-made.
- ✓ No external heat conductors such as mesh, plates, or pins.
- ✓ Removable and reusable.
- ✓ Lagging helps reduce DPM by keeping internal exhaust temperature higher.
