

Fusion

Designed by Workspace

workspace
commercial furniture

Whether the project is for multiple workstations or a single office, a well designed system must be able to accommodate both without compromise. This is where Fusion excels – its simple design and fully resolved set of options means that you can achieve the look you want and the functionality you need for a productive working environment.

Fusion readily allows for grid pattern layouts of workstations and desks – although other possibilities like this 120 degree cluster are commonly requested and easily achieved, allowing floor space to be most efficiently utilised.

The considered design of Fusion provides versatility and flexibility during the initial design stage and if required during reconfiguration or addition. Fusion components and options allow for ease of change and addition to suit the changing workplace environment, delivering a time and cost effective solution. The Fusion design ensures an aesthetic and visually appealing design at installation, through reconfiguration and in use thereafter.

Environmentally Sustainable

During the development of Fusion system, all materials and processes to be used in its manufacture have been assessed for their environmental sustainability. We source our flat panel materials, including low emission E0 and E1 rated products, from certified suppliers and we can supply many certified screen fabrics from Australian sources. Therefore, this system meets the stringent requirements of certification programs such as GECA, Ecolabel and AFRDI Green Tick, which offers assurance to those seeking Green Star building accreditation. Furthermore, Fusion has undergone rigorous testing by AFRDI so you can be sure it has the strength and durability you are looking for.

Track

A small alteration to desk height can make a big improvement to working comfort. All screen-supported worktops can be adjusted for height, and there are several smart options for suitable support legs, requiring a simple allen key to operate.

Sit to Stand Options

Travel C Leg (Winder)

Travel H Frame (Winder)

Electronic Option

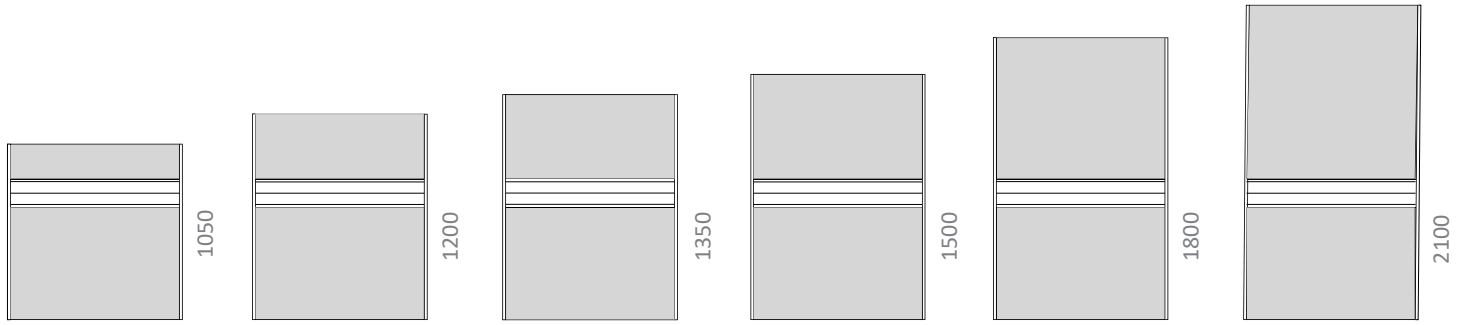

Sit to Stand

Some tasks are better managed by standing at a desk. Tech adjustment is available in these stand-alone systems, in both incremental and infinitely variable options, while the popular manual winder allows the user to immediately micro-adjust the desk to perfection.

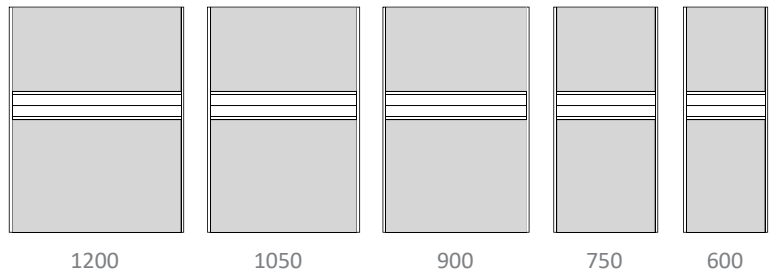

Electronic Sit to Stand

A change of height can be effortless and just one touch away with this electronic control. The height from 720 to 1110mm is displayed, so setting couldn't be easier. This feature is available for single desks or multiple workstations.

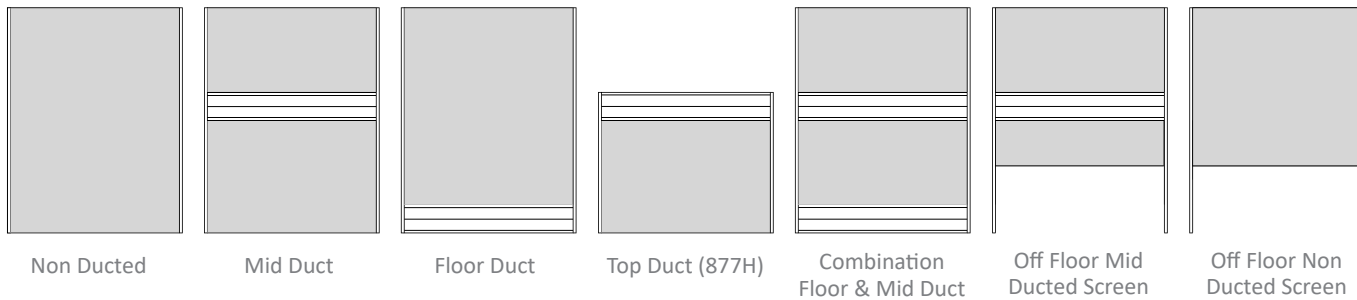

Standard Screen Heights (other heights available upon request)

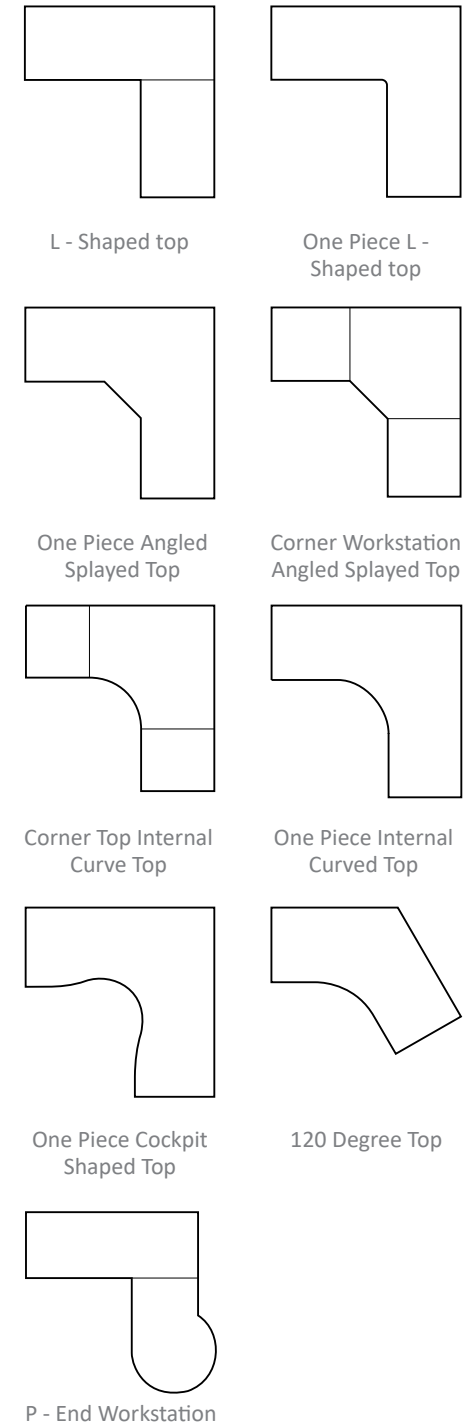

Standard Screen Widths (other widths available upon request)

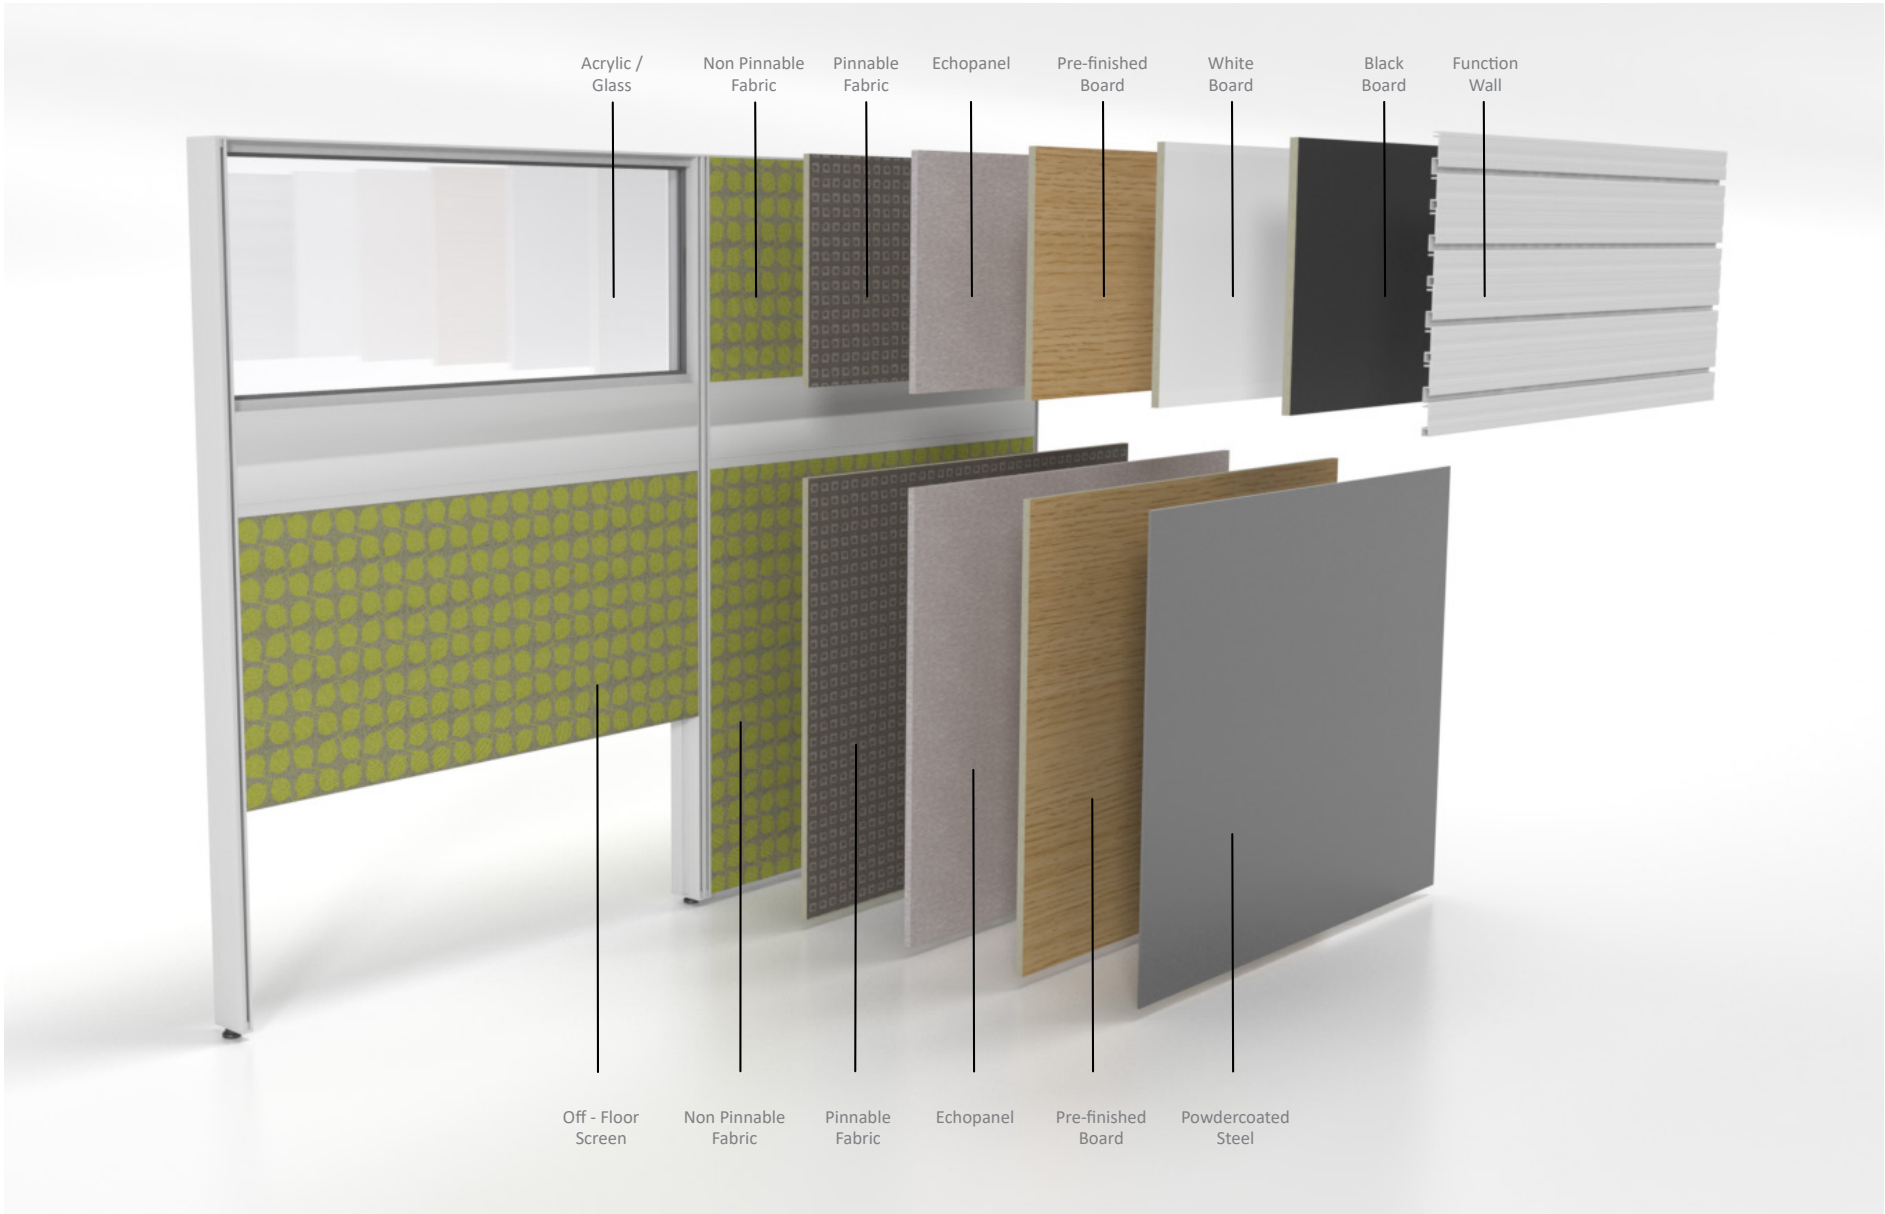

Standard Ducting Options

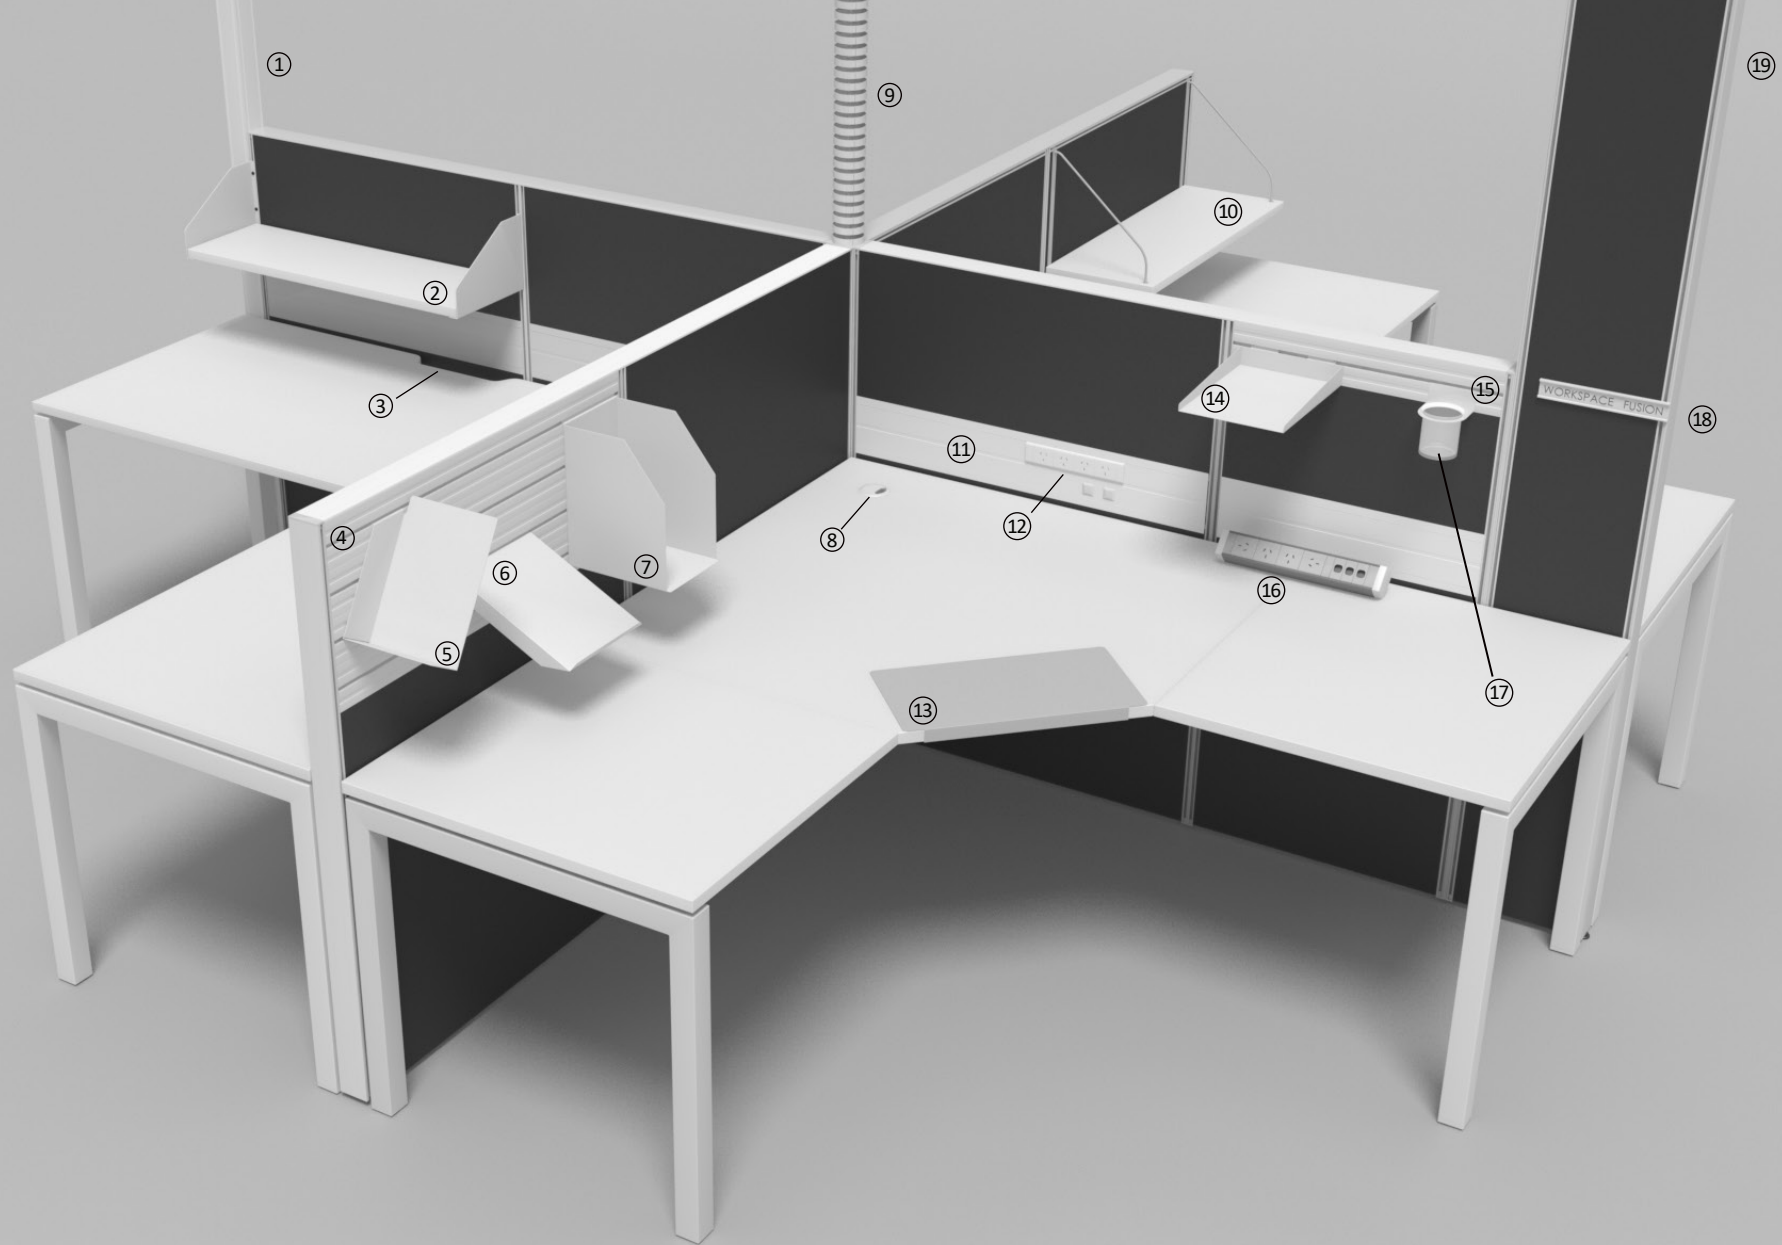

Standard worktop shapes
(Other shapes available upon request)
