# PENETRENE

## PENETRATES, LUBRICATES, PROTECTS

Penetrene Oil is an unchallenged heavyweight protectant, lubricant and rust penetrator. Penetrene has been specifically designed to meet the needs of automotive and industrial users, trades people and professionals who expect nothing less than the best.

## HOW PENETRENE WORKS?

- **PENETRATES** Its unique formulation allows it to seep into the tightest and most inaccessible areas of metal parts.
- **DISSOLVES RUST** The oil's chemical composition actively breaks down rust and other stubborn build-up.
- **DISPLACES MOISTURE:** It removes moisture from metal surfaces, which helps to prevent corrosion.
- **LUBRICATES:** After cleaning, it leaves behind a protective lubricating film to reduce friction and optimize the functionality of metal parts.

### USES:

Loosening seized bolts and screws

As a general-purpose lubricant and protectant in workshops, on job sites, and around the home

Protecting metal tools and other parts from rust and corrosion

Freeing rusted mechanical parts
