CARRIBIE

MINERAL WATER

CARRIBIE MINERAL WATER, FROM THE WILD
SOUTHERN EDGE OF SOUTH AUSTRALIA

Australia's first gastronomic mineral water, with a naturally balanced mineral composition that allows it to cleanse richness, preserve aromatic precision and reset the palate without disruption. A family-owned, protected single source, Carribie filters through ancient marine sands over 540 million year old limestone.

A natural filtration system that enriches the water with essential minerals while preserving purity.

Meaning "from where emus drink," Carribie originates from one of South Australia's most untouched coastal landscapes. Wild. Pristine. Scarce. This is a rare water from a rare place. Carribie is bottled exclusively in recyclable lightweight glass and managed with long-term environmental responsibility in mind. In 2011 whilst considering the future over 30% of the property was replanted to Trees for Life, approximately 30 acres. The source is protected.

THE LANDSCAPE IS RESPECTED. THE FUTURE IS CONSIDERED.

MINERAL ANALYSIS

Mineral balance determines how water performs at the table

BRAND	Origin	Country	Ownership	Preferred Structural Mineral Parameters for Gastronomic Waters								GASTRONOMIC ALIGNMENT
				TDS 600 - 800	pH 7.0 - 7.4	Mg 25 - 45	K 2 - 6	Ca 70 - 110	HCO ₃ ⁻ 250 - 400	Cl ⁻ 150-250	Na 40 - 130	
Carribie	Yorke Peninsula, SA	Australia	Family	730	7.4	32.5	4.5	92.2	363	220	141	★★★★★★
Evian	Evian	France	Danone	345	7.2	26	1	80	360	10	65	★★★★★
Beloka	Snowy Mountains NSW	Australia	Family	587	7.1	47	3.5	32	112	156	73	★★★
3 Bays	Corio Bay, VIC	Australia	Family	1300	8.3	92	3	64	300	450	190	★★
Antipodes	Bay of Plenty	New Zealand	Family	130	7	0	3.5	3.5	37	7	12	★★
Voss	Vatnestrøm	Norway	Regionwood Investments	290	5.2	0.59	0	2.7	250	12	110	★★
San Pellegrino	Terme	Italy	Nestle	930	5	49	2.4	174	245	50	31	★
Gerolsteiner	Gerolstein	Germany	Bitburger Group	2500	5.9	108	11	348	1816	40	118	★
Fiji	Yaqara Valley	Fiji	The Wonderful Company	210	7.7	15	5	18	150	9	17	★
Perrier	Vergeze	France	Nestle	475	5.5	3.9	0	150	390	22	9.6	★
Badoit	Saint-Galmier	France	Danone	1100	6	85	10	190	1300	40	150	-
Acqu Panna	Tuscany	Italy	Nestle	188	8.2	7	1	30	100	7	6.5	-

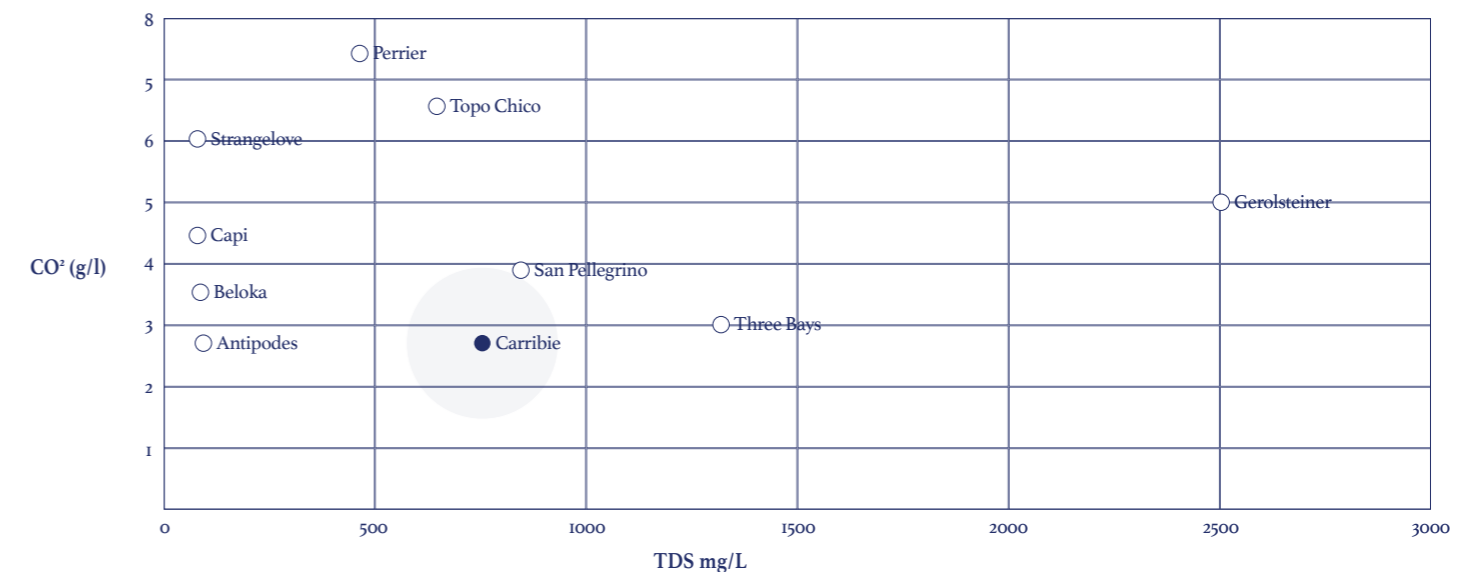

Mineral data sourced from publicly available mineral analysis published by each brand

- TDS** Total Dissolved Solids - Gives structure, weight on the palate and mouthfeel. Helps it stand alongside food and wine
- pH** Potential of Hydrogen - Neutral to slightly alkalinity is preferred with cuisine, gives softness and balance
- Mg** Magnesium - Adds freshness, lift, energy and slight tension, prevents flatness
- K** Potassium - A quiet yet critical mineral, softens the interaction between the stronger Ca, Mg, Sodium and keeps structure composed with a calm finish
- Ca** Calcium - Adds texture, body, roundness and depth
- HCO₃⁻** Bicarbonate - Buffers acidity, accentuates "champagne" like carbonation, resets the palate, assist in texture, controls the feel
- Cl⁻** Chloride - Provides savoury lift, enhanced salivation and a subtle perception of sweetness
- Na** Sodium - Savoury lift, presents a stronger mineral identity, when in balance like Carribie adds character
- Combination** Carribie's unique profile creates structure (TDS+Ca), Freshness (Mg), Harmony (K), palate cleansing (HCO₃⁻), savoury lift (Na) and neutral balance. The ratio of Carribie's Ca:Mg ratio of 2.8:1 is critical for creating a smooth, structured, refreshing, non-aggressive water
- Profile with wine** Carribie presents in a very balanced structural zone with enough mineral content to give length and texture, and enough Bicarbonate to create smooth carbonation
- Profile with cuisines** As a combination Carribie feels clean, rounded, palate refreshing and complementary with wine vs intrusive. Sparkling Carribie helps to cut richness, whilst still delivering a calm, mineral structure. Bicarbonate helps reset the palate and the minerals add subtle texture whilst cutting through fat

MINERAL WATER COMPARISON

Still to carry the wine. Sparkling to reset the palate.
