

# BUCKET EDGE SYSTEM

## Keech's Over 90 Years of Legacy Leading the G.E.T. Market and Beyond

Keech FEENX™ is a patented ground engaging tool designed for both underground and open pit conditions and suitable for any material type. Heavy duty edges and corners perform under all loading conditions, keeping wear consistent across the edge. FEENX™ is available in blade only and tooth and blade configurations.

Keech has a 15 year history of reliability on mine sites around the world. It is a proven performer from the Keech Innovation and Quality Centre - where our technical experts focus on customer challenges and develop innovative solutions.

Keech's materials and technical engineers, scientists, innovators, patternmakers and QA specialists work together on world-class projects for our global customers in mining, defence, transport and agriculture.

From better mining buckets to cutting edge ground engaging tools and wear components, we continue to innovate from the ground up.

### LEAVE NO STONE UNTURNED

From underground production and development to open pit truck load and crusher feed, the system is suitable for a range of ground engaging bucket configurations, with a variety of sizes to suit any application.

The blade only system's innovative design ensures maximum performance, with the system designed so that individual edge segments can be replaced as needed, eliminating the need to replace the entire blade system in one go.

### SAVES YOU TIME AND MONEY

The high wearing left and right corners can be changed independently from the rest of the edge system. With a variety of corner replacement edges to choose from including standard, intermediate and heavy duty, the entire edge system life is maximised by this unique design.

## PACKED WITH FEATURES

#### DRP

- Suits 50mm & 60mm Wearpact lip plates with no modification required

#### CONICAL NUT

- No access under bucket required
- Up to 30% reduction in peak stress
- Increased reliability
- Up to 12% more wear material
- Patent pending

#### IMPROVED DIGGING PROFILE

- No protrusion inside bucket
- Easy bucket emptying
- Less material hang-up
- Reduced 'throw away' material

#### WEAR INDICATORS

- Optimised wear life
- Schedule change outs

#### LOW PROFILE

Dynamic profile featuring no protrusion inside bucket  
Easy bucket emptying and less hang-up

#### CONSISTENT WEAR

Built to wear from the bottom up - so the more it wears, the sharper it gets.  
Consistent wear across edge.  
Patented Conical nut system ensures multiple retention of castings.  
Heavy duty wrap style corners for long life

# KEEPING YOU DIGGING FOR LONGER

## Blackwoods and Derwent Industries collaborate on FEENX™ Trials, Delivering 25% Longer Life.

Blackwoods has been involved in the trials of the new FEENX™ – Underground GET, which is manufactured by Derwent Industries at the KEECH facility in Bendigo.

Blackwoods National Category Manager Charles Roest says

*\* "The trials of the new range showed a 25% increase in the life expectancy over other products currently operating in the Australian market."*

*"It's been a pleasure working alongside an iconic Australian company who are on the forefront of wear and GET manufacturing. KEECH has been able to adapt to the customers' needs while providing an exceptional product."*

– Blackwoods

## WHY CHOOSE FEENX™

### PROVEN BENEFITS

#### SAVES MONEY

- ✓ Longer bucket service life
- ✓ Better bucket penetration

#### SAVES TIME

- ✓ High machine availability
- ✓ Increased reliability

#### BOOSTS PRODUCTIVITY

- ✓ Longer wear
- ✓ Increased production
