WATERPROOFING

Buildings have a variety of waterproofing needs, some of which have Australian Standards for application and product performance. Waterproofing is often the least expensive part of building or renovating, but is vital to the integrity of the building. When not done or fails, the repair costs of water damage are considerable.

Each project will have its own requirements for preparation and product application, most of which can be explained through advice or information from the web site.

BATHROOMS

New construction or renovation, preparation of the sub substrate before waterproofing membrane application is important.
Product: FIBREFLEX

BALCONIES

External environments have a variety of sub substrate, penetrations and decorative surfaces. Liquid applied waterproofing membranes are ideal.
Product: MICRFLEX or MICROL

BASEMENTS

Below ground structures need good drainage and waterproofing protection. A positive membrane system is ideal. However, repairs can involve negative tanking.
Product: FLEXIPRO

CAR PARKS

Typically, Car Parks are not waterproofed under construction and require repair to retaining walls, ceilings and other areas.
Product: Contec PLUG, Contec C1 and DIMACOAT

WATER FEATURES

Ponds, fountains, decorative water features for landscaping require a positive waterproofing membrane.
Product: FLEXIPRO or MICROL

CONCRETE REPAIR

There are so many situations and problems with concrete repair it is difficult to simplify. Suffice to say that many products and applications are applicable beyond the products we manufacture. Advice on the appropriate product is available.

POOLS

Most pools are constructed using a shotcrete application. Air pockets and weaknesses often occur. Water pressure from the ground or within the pool expose problems. Crystalline growth often solve the problem.
Product: Contec C1, Contec PLUG, ACRYLBOND

LINTELS

Decay of Lintels usually starts with the reinforcing metal rusting and exploding the surrounding concrete. Repair can involve a variety of product applications
Product: Contec C1, Contec PLUG, ACRYLBOND

COATINGS

There are a large variety of product options applicable for commercial and residential coatings. We manufacture a basic range of economic performance products. With so many products on the market, we can advise on the performance criteria, leaving the aesthetic choices to others.

COMMERCIAL

The performance requirements need to be understood. Hard wearing surfaces usually require an epoxy..
Product: DIMACOAT, POLY GLOSS

RESIDENTIAL

Colour considerations and performance requirements are part of the mix with residential coatings.
Product: DECRACOAT, POLY GLOSS, DIMACOAT

Visit our web site for more product information and advice.

SEALERS

Concrete, masonry, mineral stone surfaces are usually treated with sealers to lengthen performance of the surface, these products having a penetrating nature to allow them to wear well.

WAREHOUSE

Concrete floors and driveways can be treated economically, with durable performance.

Product: UNISEAL, ACRYLSEAL, PROTECT

EXTERNAL

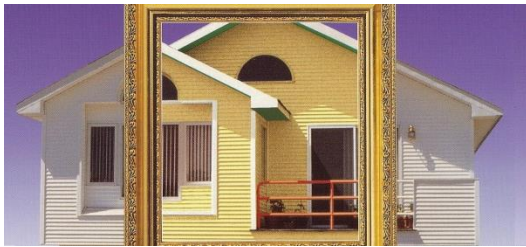

Floors of concrete, masonry pavers, bricks or sandstone can have UV sealers or Water repellent applications.

Product: HYDROPEL, UNISEAL, ACRYLSEAL, PROTECT

DECORATIVE PAINTS

Manufactured with the highest quality ingredients, our acrylic water based paints are low VOC. **Quality paint, colour matched to provide a great look.** Protection from the climatic conditions, just requires a colour choice .

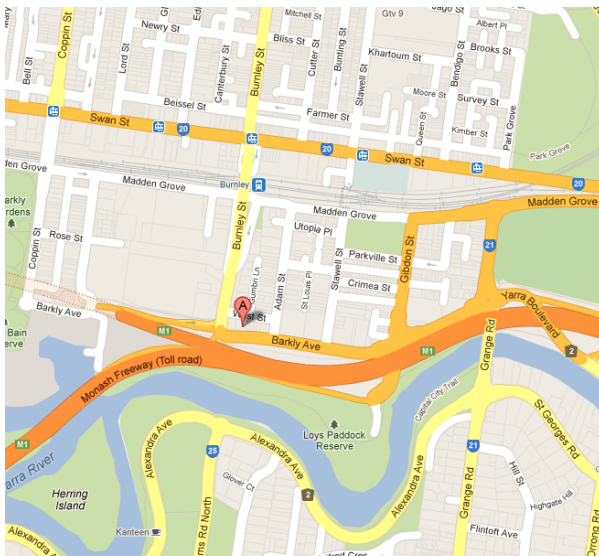

CLASSIC PAINTS

ACRYLIC GLOSS
INTERIOR FLAT
CEILING
INTERIOR LOW SHEEN

CLASSIQUE PAINTS

EXTERIOR LOW SHEEN
