

LIGHT WEIGHT DECK BUSHES

Australasian Mining Services

www.austms.com

AMS has developed and manufactured an innovative lightweight deck bush as a safer and more efficient option than traditional steel deck bushes. Lightweight deck bushes are made from a mild steel top plate, sleeve and bottom plate, which are welded together and then injected with polyurethane.

This technologically advanced process has achieved a 50%-70% weight reduction, significantly decreasing the possibility of sustained manual handling injuries.

AMS lightweight deck bushes are manufactured to suit a large range of drill configurations and can be customised to suit the needs of our customers.

ADVANTAGES

- Lightweight
- Easy to manoeuvre
- Functionality maintained
- Safer manual handling
- Eliminates need for additional lifting devices
- Customised to suit all drill configurations
