

"Success is the sum of tasks, repeated day in and day out"

In today's fast moving world we expect information to flow at the press of a button.

Data is everywhere, and everything is data. You don't just *need* it; you need it to *make sense*. When data isn't properly captured, distilled and presented, it leads to lost opportunities.

Quality data is fundamental to the success of your business.

X-Info Aware from Mipela GeoSolutions replaces outdated, repetitive and manual processes for capturing data with a simplified digital solution that works anywhere using your existing mobile phone or tablet. Your field-to-office workflow is automated, corporate systems integrated and reporting optimised with captured data immediately available to decision makers through our data management engine, X-Info Connect.

We create solutions for the Energy and Infrastructure sectors as well as small to large scale businesses and projects. Let us tailor an easy, fast, accurate, reliable and secure data capture solution that complements your unique business processes.

Simplify operations

To assist you in running your business at its optimum efficiency, X-Info Aware's forms replace repetitive, manual paper-based processes within your business with real-time assigned and ad-hoc tasks depending on your field workforce's role and geographic location.

Improve data quality

Easy-to-use forms ensure data is validated at point-of-entry to eliminate transcribing errors and ensure consistency with corporate standards. Field users can perform inspections and other data collection tasks, filing reports that include the attachment of photos and other supporting information.

Streamline task timeframes

Out-of-the-box functionality allows you to easily monitor your business processes using X-Info Connect's dashboards and automated reports sent via email / SMS. Manage workflow configuration using tasks that can be scheduled, monitored or triggered to allow available data to be fed into back-end systems in real-time. This ensures all tasks are completed on time and your projects remain on track.

Compliance ready information

All new and edited data is automatically date/ time stamped against a User Id to support quality assurance of task completion that can be viewed, printed and exported. Data can be grouped and graphed by user and date range.

Shape workforce morale

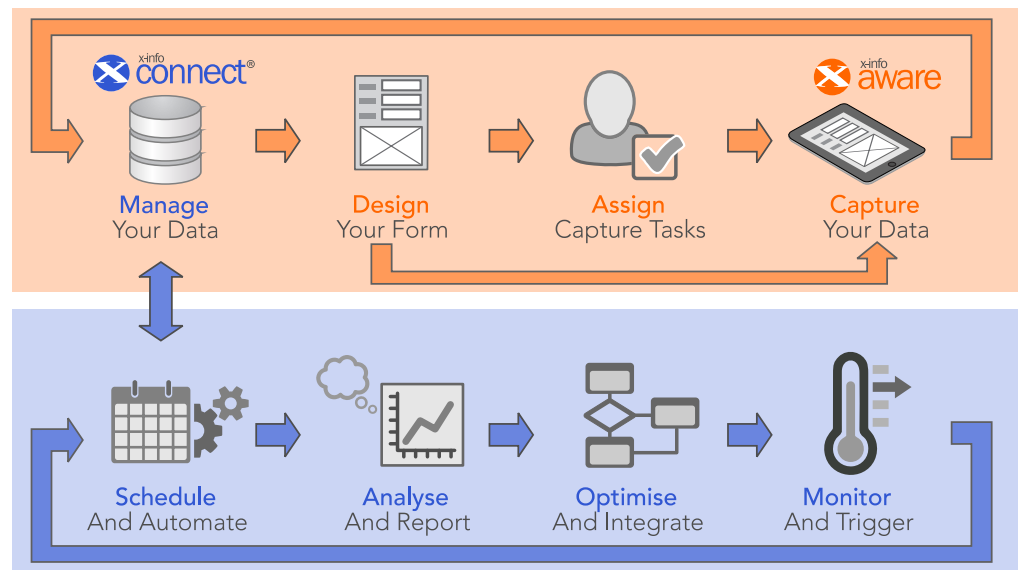

Users are provided with instant feedback and validation that their work is necessary and utilised, delivering a more efficient and integrated workforce.

X-Info Aware transforms repetitive tasks into a simple user experience enabling the Energy and Infrastructure mobile workforce to locate where they are, view their data and record what's happening wherever they are, eliminating the need for paper filing, storage, and maintenance.

7 Reasons to use X-Info Aware

- Experience**
18 years industry knowledge in location information management services and software development.
- Simplify**
the conversion of your paper processes to digital forms with no programming.
- Use your data**
import your GIS mapping data.
- Any mobile device**
Android, iOS, Windows.
- Anytime, anywhere**
online / offline caching of data.
- Leverage**
the X-Info suite end-to-end capability of data capture, management, visualisation and delivery out-of-the-box to enable your world.
- Assurance**
continue to enhance our products with the commitment of a three year rolling product roadmap, investing 20% of our revenue into R&D, listening to our client feedback and expand our thought leadership by following our continuous learning model.

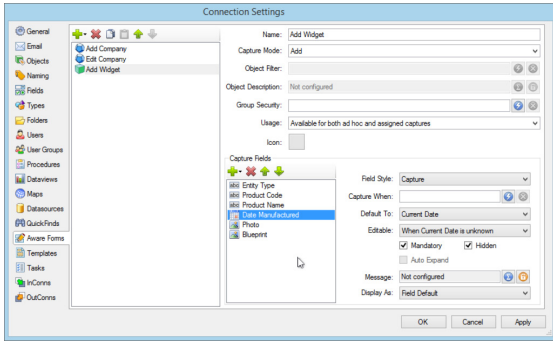

X-Info Aware at a glance

X-Info Aware is a mobile data capture tool for use with X-Info Connect.

Captured data is entered into the mobile device through forms defined within the X-Info Connect client.

The collected form data is automatically synchronised directly with X-Info Connect connections when the device is connected, or queued up for later synchronisation when offline.

Form Design

Administrators create capture forms in X-Info Connect.

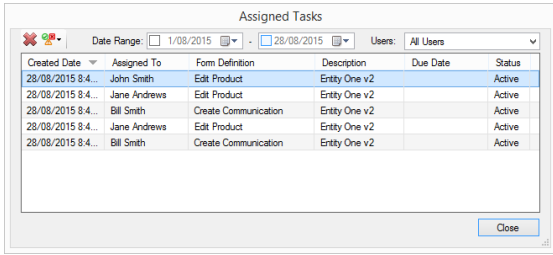

X-Info Aware on your device

Android 4.1+

iOS 8+

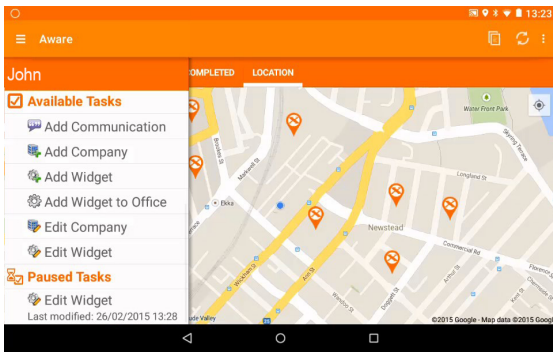

Task Assignment and Administration

Use X-Info Connect to manage the status of assigned tasks.

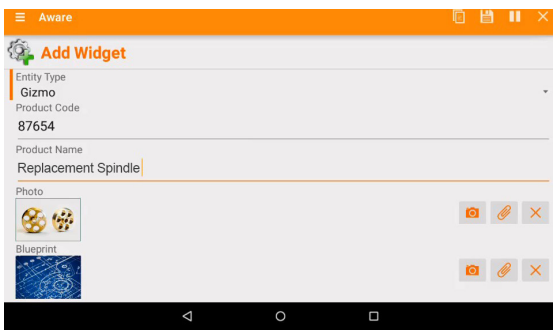

Windows 10+ coming soon

Online and Offline Operation

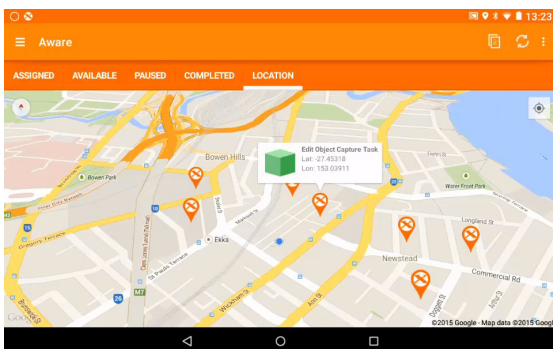

Aware is designed to operate with or without an active Internet connection with data cached on the mobile device.

“We take the time to understand your business, your processes, your data and your training needs to tailor a solution that’s perfectly suited to the way you work.”

The Aware Interface

Aware forms are easy to complete and can include a variety of field types including rich media fields.

The Location tab

Tasks are displayed geographically using most common mapping systems.
