

# Best Australian
# Handcrafted Natural Soap

# About Us

The Australian Olive Oil Soap is a small family business based in Melbourne, handcrafting soaps using traditional cold process with natural ingredients that Mother Earth gave to us and as many Australian ingredients as possible.

Why are we called “The Australian Olive Oil Soap”? Simply because we use Australian extra virgin olive oil as the main ingredient in our soap.

Our olive oil soaps are handmade from scratch, made simply from oils and butters and then transformed into beautiful soap bars with natural glycerin produced during the traditional cold process.

We are different...
We are on mission to make healthy soap, healthy natural skin care for healthy skin and for better environment.

* **Quality:** We hand blend our own products in small batches to ensure the freshness, consistency and as pure nutrition for skin and hair.

* **Natural**: Our products always and will always contain nothing but natural ingredients. There is nothing artificial, synthetic, GMO’s ingredients used.

* **Eco-friendly:** Our company believes in minimal packaging. We care about our earth and our planet.
Our packaging is Plastic FREE!

# Why Olive Oil?

Olive oil has been used for its beauty benefits on skin and hair for centuries. It is a wonderful moisturisier full of natural anti-aging properties, antioxidants, vitamin E and squalene.

Olive oil is a common base oil used in soap making.
It makes a nice hard bar of soap; it is very moisturising.

Not all olive oils are created the same soap!
Extra virgin olive oil is 100% the juice from olives. It is the purest, cold-pressed olive oil. Olive oils labeled “Olive oil” or “Pure Olive Oil” are blends of refined and unrefined oils. Pomace olive oil is the poorest quality olive oil.

At “The Australian Olive Oil Soap”, we only use extra virgin olive oil from Australia.

# Why Goats Milk?

Goat milk has been used from ancient Egypt for bathing. The alpha hydroxy acid (AHA) such as lactic acid in goat milk is a powerful humectant.
It helps to gently remove dead skin cells and helps to hydrate and brighten the skin. Goat's milk contains vitamins and minerals important for healthy skin including zinc, amino acid, vitamin A, B, C & E.

Goat milk soap is wonderful for dry and sensitive skin. Using goat milk soap on a regular basic, will likely find that the skin requires less moisturiser.

# How we make our soap

Our soap is handcrafted from scratch using ancient, traditional cold process meth- od with Australian extra virgin olive oil as our main ingredient.

We mix quality natural oils and organic butters with alkali water until the mixture reaches traced. We add pure essential oils and pour the mixture into our wooden moulds to set for 48 hours. The soap is then cut into small logs or bars and left to cure for a minimum of 4 weeks. It then becomes a natural cleansing bar with natural moisturiser.

All of our soaps have natural tan colour or natural colours from herbs and clay. We do not use titanium dioxide or any dioxides to whiten, thicken or colour the soap.

The fragrances we use for our soap are all high quality pure essential oils. There are no artificial, synthetic fragrances used.

We use highest quality, pure natural or organic ingredients and as many Australian ingredients as possible.

We don’t use palm oil, sodium lauryl sulphate and parabens in our soap.

We are proudly make our soap in Melbourne - Australia.

# Wholesale
