- Alternative to petrochemical sorbolenes

Vegesorb is a scientifically formulated, natural, fragrance free, vegetable based moisturiser designed to boost skin moisture and provide vital skin compatible oils.

The hydrating and lubricating properties of the ingredients offer long lasting protection against dry chapped skin caused by cold winter winds. Vegesorb also soothes and softens making skin feel fresher and smoother.

The ingredients are high quality oils from cold pressed almonds and apricot and other plant derivatives including coconut and palm which are suitable for use on all skin types.

Vegesorb is manufactured in a Queensland owned, licensed GMP factory.

Kym Volp the creator of Vegesorb graduated from Queensland University of Technology in 1997 with a First Class Honours degree in Applied Science (Microbiology/Biochemistry) and was awarded the University medal for outstanding academic achievement.
