

DON'T JUST TAKE OUR WORD FOR IT!

Smart Sinks mobile units are delivering outstanding results for customers on jobsites around the country... but don't just take our word for it – here's what some of our customers had to say:

"We love it. We just move it to where the setters need it, making the job faster and cleaner."

"The Smart Sinks unit is ideal - especially during this time with Coronavirus. It helps us to minimise the amount of movement around the site"

"Smart Sinks have saved us a fortune in wasted downtime. With the washout facilities right there at the job face, the crews don't have to keep travelling to the basement to clean up the tools."

"It's clean, it's simple, and it looks fantastic. Our old washout bin was disgusting – and it needed washing out constantly. With the Smart Sinks, it's easy to change the filter bags and hose down the unit at the end of the day. It's a great bit of kit"

ENVIRONMENTALLY RESPONSIBLE

Smart Sinks help you to comply with EPA, State & Local Government environmental controls by keeping plaster sediment & suspended solids out of drains, trade waste and gutters.

CLEAN RECYCLED WATER

Smart Sinks' Patented 5-stage filtration technology filters the washout water down to 1 micron, resulting in clean filtered water for tool washing and washout, which can be disposed of into the drain when you're done.

SAFE & EASY DISPOSAL OF SOLIDS

Sediment is collected in disposable filter bags that can be safely disposed of in the site's normal waste bin.

NO WATER SOURCE REQUIRED

With 60 litres of onboard water, Smart Sinks enables you to bring the washout facilities to the work area.

100% MOBILE

Large foldable trays allow for easy transport around the job site and washing of all-size tools.

SAVE TIME

Smart Sinks fully self-contained mobile design delivers clean recycled water for tool washing and washout where you need it and when you need it – right at the job face!

SAVE WATER

By using clean recycled water, Smart Sinks can help you save thousands of litres of water each week – even on relatively small jobs.

SAVE MONEY

Smart Sinks can save you money by significantly reducing the time spent traveling between the job face and the tool washing facilities. In fact, some mobile Smart Sinks owners are reporting that the unit saved them so much time, that it easily paid for itself with the first job in downtime hours saved.
