Product Information

Painting & Chemical Process:

All of our aluminium products are treated with a chemical etch application, during the manufacturing process.

This is a clear, concentrated liquid acid detergent, which has been formulated specifically for cleaning and brightening aluminium surfaces.

As a result, this non-toxic & colourless finish, prepares our panels for painting.

***Surface scratches may be present on raw aluminium panels.**

We recommend applying 1 coat of primer and 2 top coats of chosen colour. These must be compatible with one another (talk to a paint specialist). **A metal primer is NOT required due to the etch treatment.**

Our panels can be brushed, rolled or spray painted. Use methylated spirits & a clean cloth to clean finger marks prior to painting.

Our Galvanised products are not chemically etched unless requested.

Panel Sizes:

Panels are available in nominal sizing of:

- 600mm x 1800mm Approx
- 900mm x 1800mm Approx.

***Not all designs are available in both sizes.**

Some designs are available in 600mm x 600mm approx & 470mm x 620mm approx.

Borders and cornices are available in approximately 1800mm lengths.

For accurate sizes of all designs, please refer to our website.

Installation:

Pressed Tin Panels® pressed metal products, allow an over-lap join.

The pattern than runs continuously along the wall or ceiling without a double-up impression.

To view our installation guides & videos, please scan the QR code.

Powder Coating:

We highly recommend powder coated panels for high traffic areas, e.g. splashbacks, bathrooms, shower recess etc.

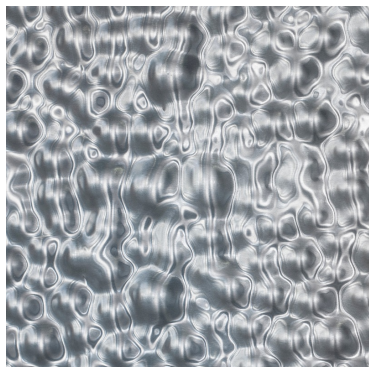

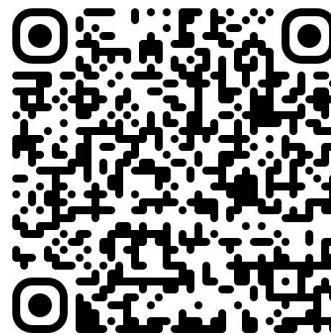

Powder Coating is a baked on finish that is extremely durable and easy to clean.

***Powder Coat colours may vary or be unavailable at time of purchase.**

To clean, use spray or soapy water & cloth to wipe over. Avoid any abrasive products & materials.

P/C = Powder Coat Colour
