

aquapure

Purify Your Pool Naturally

3 YEAR
Factory Warranty

- ✓ Copper and Silver Pool Ioniser with built in filtration timer
- ✓ Natural Solution to manage algae
- ✓ Adjustable ions output & run time

aquapure

THE AQUAPURE IONIC PURIFIER

The Aquapure is a swimming pool, spa and pond ioniser that controls the filter, pump run times and current output to the copper and silver alloy electrodes.

The battery backed up clock controls multiple filter and ionising times as well as auto winter and turndown modes. The Aquapure is designed to suit pools up to 100,000 litres.

HOW IT WORKS

The Aquapure applies a small, controlled current to a pair of electrodes made of a silver and copper alloy. These electrodes are set apart from one another in a cell that is fitted after the pool filtration.

Electrolysis occurs as the water passes over the energised electrodes, producing natural silver and copper mineral ions. The silver ions attack bacteria in the water and the copper ions inhibit the growth of algae. As ionisation is not affected by temperature, the Aquapure works well in both hot and cool climates.

PRODUCT BENEFITS

Safe for skin and eyes
Kills algae and bacteria

Minimises the requirement for chlorine
Improved filtration

Not harmful to pool components
Low energy consumption

Unaffected by bather load
Unaffected by heat

PRODUCT FEATURES

Manual pump over-ride
for filter back-washing

Multi-function pump time-clock

Simple electrode replacement
Ions active timer
