GRT

Drill & Blast Dust Control

GRT:12X

The quickest and most effective way to capture and control hazardous dust from drilling operations.

PRODUCT FEATURES:

- 12x more effective at dust capture than water alone
- Saturates high velocity dust quickly to prevent it becoming an airborne hazard
- Targets the cause of black lung and silicosis
- Helps with drill hole stability
- Safe for workers all day, everyday
- Easy application through your existing water spray systems

Certified System
Quality
ISO 9001
SAI GLOBAL

GRT: 12X super-activates drill water to ensure fine, hazardous dust is captured - forcing the air-borne dust particles to drop out of suspension.

Dosed into the drill rigs water tank at ratios between 1:1000 to 1:2000 (soil dependent), GRT: 12X penetrates the material surfaces and intercepts airborne particles immobilising fugitive dust. Importantly, the solution does not negatively impact ore properties or drill & blast activities.

TEAM UP THE GRT: 12X WITH GRT: DCBINDER TO FULLY MANAGE DUST IN YOUR DRILL & BLAST OPERATIONS
