About Air-Met Scientific

Since 1984, Air-Met Scientific has been helping organisations across Australia create safer workplaces, protect the environment and make informed decisions through trusted occupational health, safety and environmental monitoring solutions.

We understand that reliable monitoring is critical. That's why we partner with leading Australian and international manufacturers to deliver world-class technologies, backed by local expertise, technical support and responsive service. From equipment sales, rental and servicing to NATA accredited calibration and customised engineered solutions, we provide the knowledge, capability and ongoing support our customers rely on throughout the life of their equipment.

As Australia's leading independent provider of OHS and environmental monitoring solutions, we work alongside our customers to understand their unique challenges and deliver practical solutions that meet their operational, compliance and environmental objectives. Our experienced team is committed to building long-term partnerships founded on trust, reliability and exceptional service.

Whether protecting worker health, supporting environmental monitoring programs or helping organisations meet regulatory requirements, Air-Met Scientific delivers the confidence, expertise and solutions needed to make informed decisions and create safer, healthier environments.

Contact your local Air-Met Scientific office today on **1800 000 744** or visit www.airmet.com.au to discuss your project requirements.

Our People

Experienced and passionate professionals committed to delivering world-class monitoring solutions to our clients.

At Air-Met Scientific, we believe our employees are our most important asset. We employ over 80 team members nationwide, forming a tight knit and diverse team that is comprised of sales and rental instrumentation experts, experienced service technicians, engineers, equipment coordinators product specialists and support staff.

Our people take great pride in developing strong and lasting relationships with our clients to better understand their needs and concerns. Striving to deliver the best outcomes every step of the way, our localised support teams take a proactive and hands-on approach to customer service.

Quality Assurance & Accreditations

ISO 9001 Quality Management System

Established by the international organisation for standardisation (ISO), ISO 9001 has become the most universally recognised and trusted quality management system across all virtually all industries. Being certified ISO 9001 indicates that Air-Met Scientific has met the specific requirements for a QMS where the capability to provide a product and/or service that meets customer regulatory mandates has been consistently demonstrated.

NATA Accreditations

Established in 1947, the National Association of Testing Authorities (NATA) provides independent assurance of technical competence through a proven network of best-practice industry experts for customers who require confidence in the delivery of their products and services. Air-Met Scientific is accredited for the following:

- ISO/IEC 17025 – NATA accredited on Calibration of gas detectors including on site
- ISO/IEC 17025 – NATA accredited on Calibration and Testing of air sampling pumps and flow meters.

Australian Made

The iconic Australian Made, Australian Grown (AMAG) logo is the true mark of Aussie authenticity. It is the most trusted, recognised and widely used country of origin symbol and it ensures products that carry the logo are certified as “genuinely Australian”. Australian owned and operated since 1984, Air-Met Scientific is proud to be part of the Australian Made family with two of our locally designed and manufactured monitoring stations entrusted to carry the Australian Made logo. These include the AirMetER-AX and AirMetER-DX Monitoring Stations.

GreenPower Renewable Electricity

Air-Met Scientific is committed to reducing our environmental impact through practical and measurable sustainability initiatives. As part of this commitment, we purchase renewable electricity through the Australian Government-backed GreenPower program, helping support the growth of Australia’s renewable energy industry while reducing the emissions associated with our operations. GreenPower forms part of our broader environmental sustainability journey, reflecting our commitment to responsible business practices and continuous improvement.

How We Support Industries

At Air-Met Scientific, we endeavour to work towards advancing collective knowledge in the industries we service and supply.

The way we do this is through sponsoring and associating with leading industry organisations, so they are supported to further industry knowledge to provide a safe and healthy environment for workers and the community.

The below are some organisations we are proud to be a part of:

Australian Institute of Occupational Hygienists (AIOH)

Air-Met Scientific has been a long-standing supporter of the AIOH since the 1980's, supporting AIOH members through the Air-Met Scientific Professional Advancement Award. The premier professional award provides a selected applicant with an all-expenses paid opportunity for professional development through attendance at the AIHA Connect conference, an invitation to travel post conference to SKC Inc. in Pennsylvania, USA, and other industry and government institutions in USA and/or Canada.

Faculty of Asbestos Management of Australia & New Zealand (FAMANZ)

FAMANZ aims to reduce the associated harm of asbestos to the community by advancing education, improving asbestos management practice, and furthering industry knowledge to provide a safe and healthy environment. Air-Met Scientific is committed to contributing positively to the asbestos management industry through its support of FAMANZ as well as through the Air-Met Scientific Derek Miller Award presented annually at the FAMANZ Asbestos Conference.

RESP-FIT - Respirator Fit Testing Training & Accreditation

The Respirator Fit Testing Training and Accreditation Program is a program developed by the AIOH (Australian Institute of Occupational Hygienists) through the collaboration of many industry stakeholders. The primary goal is to improve the competency of fit testers against both the Australian and international ISO respirator standards for fit testing, and in turn improve worker health protection for those wearing tight fitting RPE. Air-Met Scientific is proud to support the important work and educational courses conducted by the RESP-FIT Respirator Fit Testing Training and Accreditation Program.

Environmental Sustainability

At Air-Met Scientific, making a difference is part of who we are. It reflects our culture and our commitment to protecting the environment while supporting the industries and communities we serve. As a provider of occupational health, safety, and environmental monitoring solutions, sustainability is embedded in the way we operate, extending beyond the products we supply to the way we manage our own environmental footprint.

Our approach to sustainability is practical, measurable and focused on continuous improvement. We work to better understand our environmental impact through data, reduce emissions wherever possible, and take responsibility for what remains. We also collaborate with our suppliers, partners and customers to drive meaningful environmental improvements across our value chain.

Our sustainability efforts include:

- Carbon accounting and ongoing emissions reduction initiatives
- Renewable electricity procurement through the Australian Government-backed GreenPower program
- Carbon neutral Scope 1 and Scope 2 operations through renewable energy and certified Australian carbon offset projects
- Solar energy generation across selected office locations
- Sustainable packaging initiatives
- Recycling programs for paper, cardboard, plastics, metals, batteries, toner cartridges and calibration gas cylinders
- Freight and travel optimisation to reduce transport-related emissions
- Collaboration with suppliers to improve packaging, increase recyclability and support more sustainable supply chains
- Continuous improvement through environmental reporting, governance and responsible resource management

Our Suppliers & Partners

Partnering with both local and international suppliers to offer industry-leading solutions

Bringing innovative technologies and reliable monitoring solutions to our clients is an integral part of our business. We partner with trusted brands and industry-leaders from across the globe to help achieve this vision.

Authorised & Recognised Service Centres

Whether it's routine maintenance, calibration or product repair, Air-Met Scientific's network of service centres are located conveniently around Australia to provide our customers with service support nationwide.

As authorised and recognised service centres for many trusted brands, our customers have the assurance that their instrumentation will only be serviced by factory trained and qualified service technicians with genuine and original parts from the suppliers.

Our Capabilities & Expertise

OHS & Environmental Monitoring Equipment Specialists

Partnering with leading Australian and international manufacturers, we supply high-quality monitoring equipment backed by expert advice, technical support and ongoing service.

Our range of products are suitable for applications including:

- Air sampling
- Dust monitoring
- Gas detection
- Heat stress monitoring
- Radiation monitoring
- Noise, sound and vibration monitoring
- Soil and groundwater monitoring
- Surface and dermal sampling
- Environmental monitoring
- IAQ monitoring
- Fit testing

Equipment Maintenance & Service Support

Air-Met delivers expert servicing, calibration and repair solutions to maximise the performance, accuracy and reliability of your monitoring equipment. Our experienced technicians provide responsive support to keep your instruments operating with confidence.

Our capabilities include:

- NATA Accredited calibrations
- Standard instrument calibrations
- Instrument repairs on most industry brands
- On-site service support and repairs
- Original accessories and spare parts
- Total care packages for peace of mind
- Software and firmware updates

Equipment Rental

Air-Met Scientific offers flexible equipment rental solutions to help organisations access the latest OHS and environmental monitoring technology without the cost of ownership. Our extensive rental fleet, supported by experienced specialists and a nationwide network, ensures equipment is ready when and where you need it.

Our capabilities include:

- Short and long term rental
- 6 rental offices nationwide
- Regular calibrations and service before dispatch
- Complete instrument management programs
- Delivery transit allowance
- Optional on-site training
- Comprehensive range of consumables
- NATA accredited calibrations on request

Engineered Solutions

Air-Met Scientific designs and delivers customised monitoring solutions for applications where standard products are not the right fit. Our experienced in-house engineering team works closely with customers to develop tailored systems that meet unique operational requirements, improve efficiency and deliver long-term value.

Our engineered solutions support applications including:

- HVAC
- Warehouse and storage
- Oil and gas
- Mining
- Food and beverage
- Carparks
- Universities and laboratories
- Healthcare and medical facilities
- Offshore mining
- Agriculture
- Water treatment plants

Our Valued Clients

Since 1984, organisations across Australia have trusted Air-Met Scientific to deliver reliable occupational health, safety and environmental monitoring solutions. From small businesses to some of Australia's largest organisations, we support customers across a diverse range of industries, including mining, oil and gas, telecommunications, defence, manufacturing, food and beverage, agriculture and many more.

Whether supplying equipment, providing expert service and calibration, delivering flexible rental solutions or developing customised engineered systems, we are committed to helping our customers achieve safer workplaces, regulatory compliance and better environmental outcomes.
